Meat collection

Hygienic cleaning and material handling

Available from Vikan North America

The meat industry is mandated by regulations to follow stringent sanitary operational procedures. Whether the objectives are to avoid allergen-cross-contact, foreign or bacterial cross-contamination, proper tool selection, storage, care and maintenance can make a significant difference in influencing food safety and sanitation. Moreover, we have the best available scrubbing and detail brushes for removing stubborn blood stains and rigid biofilms from vats, grinders, conveyers and other equipment surfaces.

Regardless of a meat processing operation's size and complexity, our color-coded tools can effectively help prevent contamination incidents between designated zones for handling raw carcasses or processed products. Also, our tools are available in as many as 12 colors, making them ideal for integration with color-coded plans.
